

IT Asset Liquidation

GET THE MOST OUT OF YOUR IT ASSETS

The average life cycle for most computers and IT equipment is between 3-4 years. Most companies throw away IT equipment at the end of this cycle and simply deal with the loss of their original investment. But there's another way to deal with end-of-life IT equipment, and make money in the process.

ITEMS LIQUIDATED

When it's time to replace technology, 2NDGEAR can help you with asset monetization services and remove electronics items such as:

- Desktops and Laptops
- Monitors
- Servers and Storage
- Networking Hardware
- Phones
- Printers
- And more

THE PROCESS

Once we get your items into the 2NDGEAR Technology Center, our expert engineers and technicians take your used IT equipment and refurbish them to meet their original condition. Then in their renewed condition, these items can be offered to organizations looking for price reduced, reliable hardware. Using this process to recycle, 2NDGEAR aids in reducing e-waste while offering you cash for supplying the used material.

ADDITIONAL RESOURCES

Along with refurbishing, we also offer de-installation, packaging, and pickup services - making it easier to work with us, rather than simply disposing of your IT equipment.
